4. The following is an examiner's statement of reasons for allowance:

The closest prior art in the field, Menezes et al., "Handbook of Applied Cryptography," CRC Press 1996, Kent White, "Experiments in Parallel Processing for Undergraduate Students," 29th ASEE/IEEE Frontiers in Education Conference, and Daniel M. Gordon, "A Survey of Fast Exponentiation Methods", Journal of Algorithms 27, 1998, do not teach the combination of features of the applicant's invention as set forth in the independent claims, particularly including:

As per claims 1, 2, 15, 24, 28, 54, 64 and 65, performing a plurality of primality tests on a plurality of randomly generated prime numbers whereby the tests are performed in parallel, and where each of the plurality of primality tests include an associated exponentiation operation executed by an associated one of a plurality of exponentiation units.

As for claims 36 and 45, the arrangement of a plurality of exponentiation units, each communicatively coupled to a processor, where each includes a plurality of exponentiation units operating in parallel and responsive to one of a set of test parameters and operative to generate a primality test result for a prime number candidate declaring it composite or prime.
